

Guide for Authors

Brain & Development is aimed to promote clinical child neurology and developmental neuroscience. Submissions considered for publication to *Brain & Development* are received on the understanding that the work described has not been published previously (except in the form of an abstract or as part of a published lecture or academic thesis), that it is not under consideration for publication elsewhere, that its publication is approved by all authors and tacitly or explicitly by the responsible authorities where the work was carried out, and that, if accepted, it will not be published elsewhere in the same form, in English or in any other language, without the written consent of the copyright-holder. For information on Ethical guidelines for journal publication see <http://www.elsevier.com/ethicalguidelines>.

Submission of manuscripts

Brain & Development now proceeds totally online via an online submission system. In case you do not have an internet connection, please contact the Editor-in-Chief for alternative instructions. By accessing the online submission via Elsevier Editorial System, <http://ees.elsevier.com/bradev>, you will be guided stepwise through the creation and uploading of the various files. When submitting a manuscript online, authors need to provide an electronic version of their manuscript and any accompanying figures and tables.

The author should select from a list of scientific classifications, which will be used to help the editors select reviewers with appropriate expertise, and an article type for their manuscript. Once the uploading is done, the system automatically generates an electronic (PDF) proof, which is then used for reviewing. All correspondence, including the Editor's decision and request for revisions, will be processed through the system and will reach the corresponding author by e-mail. If you need more details, please refer to "Tutorial for Authors" link under the "Author Information" column at top page of online submission system: <http://ees.elsevier.com/bradev>.

Once a manuscript has successfully been submitted via the online submission system authors may track the status

of their manuscript using the online submission system (details will be provided by e-mail). If your manuscript is accepted by the journal, subsequent tracking facilities are available on Elsevier's Author Gateway, using the unique reference number provided by Elsevier and corresponding author name (details will be provided by e-mail).

Authors may send queries concerning the submission process or journal procedures to the Central Editorial Office: Masashi Mizuguchi, Editor-in-Chief: bradev@childneuro.jp.

For further details on how to submit online, please refer to the online EES Tutorial for authors or contact Elsevier's Author Support Team at authorsupport@elsevier.com.

In general, manuscripts should be prepared according to the guidelines produced by the International Committee of Medical Journal Editors: Uniform Requirements for Manuscripts Submitted to Biomedical Journals. JAMA 1997;269:927-934.

Language

Only English articles will be accepted. Authors whose native language is not English should enlist the help of colleagues who are proficient in scientific English.

Please write your text in clear and grammatical English (American or British usage is accepted, but not a mixture of these) and authors should conform to the general style of the journal and the specific instructions listed below. Authors who require information about language editing and copyediting services pre- and post-submission please visit <http://www.elsevier.com/languagepolishing> for more information. Please note Elsevier neither endorses nor takes responsibility for any products, goods or services offered by outside vendors through our services or in any advertising.

Manuscripts that are written in poor English and/or not properly prepared will be returned to the authors without review, since it is not feasible for the Editors to undertake extensive revision or rewriting of manuscripts submitted.

Ethics

For all manuscripts dealing with experimental work involving human subjects, specify that informed consent was obtained following a full explanation of the procedure(s) undertaken. Patients should be referred to by number; do not use real names, initials or hospital numbers. Also, the design of special scientific research in human diseases or of animal experiments should be approved by the ethical committee of the institution or conform to guidelines on animal care and use currently applied in the country of origin. This must be stated at an appropriate point in the article.

Patient details

Unless you have written permission from the patient (or, where applicable, the next of kin), personal details of patients included in any part of the article and in any supplementary materials (including all illustrations and videos) must be removed before submission. For further information see <http://www.elsevier.com/patientphotographs>.

Conflict of Interest

Based on the detailed enforcement regulation of the guideline for Conflict of Interest's management in conducting clinical research, all authors must indicate whether or not they have a financial relationship with the organization that sponsored the research. (They should also state that they agree to allow the journal to review their data if requested.)

The manuscript must be accompanied by the "Potential Conflict of Interest Report for Authors". This form can be obtained from http://www.elsevier.com/framework_products/promis_misc/BRADEV_PotentialConflictInterestReport2011.pdf.

Please be sure to attach this form along with subsequent submission of your revised manuscript.

Funding Body Agreements and Policies

Elsevier has established agreements and developed policies to allow authors whose articles appear in journals published by Elsevier, to comply with potential manuscript archiving requirements as specified as conditions of their grant awards. To learn more about existing agreements and policies please visit <http://www.elsevier.com/fundingbodies>.

Referee recommendations and negative preference

To help ensure that papers are reviewed by the most suitable referees, authors may provide a list of three potential referees (including names, addresses, fax and e-mail) who do not have conflict of interest in the

research being submitted. The Editors reserve the right to choose different referees from the ones suggested. You may also suggest reviewers you do not want to review your manuscript, but please state your reasons for doing so.

Article Types

Original Articles

These may describe original clinical or laboratory research. The main text of original articles should generally be in the format of: Structured Abstract, Keywords, Introduction, Materials/Subjects, Methods, Results and Discussion. Authors are reminded that articles should be clear and concise and non-standard abbreviations avoided. Please provide approximately 250 words structured abstract and 3-9 keywords separately. Up to 30 references are recommended.

Reviews

Reviews may concern either clinical or laboratory scientific topics. Relatively brief reviews of between 2,500 and 3,000 words are particularly welcome. Longer reviews are acceptable when justified by topic and comprehensiveness. The format of the main text is same above original articles.

Case Reports

A case report should describe a new disease, or confirmation of a rare or new disease; a new insight into pathogenesis, etiology, diagnosis, or treatment; or a new finding associated with a currently known disease. A report of special scientific investigation, even in a single patient, will be regarded as an original article. The length should ordinarily be less than 1,000 words, with no more than a total of 3 tables and figures and 10 references. This can be exceeded only when justified by extensive special studies. The format of the main text of case reports is also same as original articles.

Letters to the Editor

These should be up to 300 words in length, and should be submitted in response to material published in the journal to make small clinical points or to introduce a point of view. They can be accompanied by up to 5 references but no illustrations. Letters do not carry an abstract.

Proceedings of Meetings

Full manuscripts or abstracts of papers presented at scientific meetings shall be considered for publication as Proceedings in the form either of a supplementary volume, a special issue, or as a section in an issue.

Publication will be at the discretion of the editors. Printing costs should be borne by the contributor.

As an approximate guide to authors judging the length of their paper, the following estimation may be used: 3 typewritten A4 pages = 1 printed page; 3 ‘average’ figures + legends = 1 printed page; 3 ‘average’ tables = 1 printed page; 35 references = 1 printed page.

Manuscript format

The manuscript should be set out with the following sections beginning on a new page:

(i) Title page (title taking up to 80 spaces; full names and affiliations of all cited authors with the surname in uppercase letters; corresponding author’s name, full mailing address, fax number, and email address; present address of authors where appropriate); See concrete examples at http://www.elsevier.com/framework_products/promis_misc/BRADEV_TitlePageSample.pdf

(ii) Structured abstract and 3–9 key words;

(iii) Text and acknowledgments;

(iv) References; See concrete examples at http://www.elsevier.com/framework_products/promis_misc/BRADEV_SupplementInformation.pdf

(v) Figure legends;

(vi) Tables with their legends.

Abstracts for original articles or reviews should be approximately 250 words long; case reports and communications may be shorter. The abstract should summarize the methods, results and conclusions of the article. Structured format is preferable. An abstract is often presented separate from the article, so it must be able to stand alone.

References

References to literature must be indicated by Arabic numerals in square parentheses which run consecutively through the paper. Where a reference is cited more than once in the text the same number should be used each time. Reference style should follow the “Vancouver” style described in the “Uniform Requirements for Manuscripts Submitted to Biomedical Journals” (further information can be found at <http://www.icmje.org>). The titles of journals should be abbreviated according to the style used in Index Medicus. See concrete examples at http://www.elsevier.com/framework_products/promis_misc/BRADEV_SupplementInformation.pdf

Digital Object Identifier

The digital object identifier (DOI) may be used to cite and link to electronic documents. The DOI con-

sists of a unique alpha-numeric character string which is assigned to a document by the publisher upon the initial electronic publication. The assigned DOI never changes. Therefore, it is an ideal medium for citing a document, particularly “Articles in press” because they have not yet received their full bibliographic information. The correct format for citing a DOI is shown as follows (example taken from a document in the journal *Brain & Development*): doi:10.1016/j.braindev.2007.12.013

Exceptions:

(1) List all authors or editors, but if there are more than six, list first six plus et al.

(2) Full first page number and shortened form for last page number of articles should be provided. (e.g. 51–9). Unpublished data and personal communications should be given in round parentheses in the text and not as references.

(3) Reference information should be indicated correctly, not from the database, but from the original paper if possible.

Japanese journals should appear with the full Japanese name in Roman letters, e.g. No To Hattatsu. To refer to a book or journal article written in Japanese, the phrase “(in Japanese)” should be added after the title of the book or article. References written in a language other than English should be used minimally, the fewest possible.

Examples of journals

Figures and Photographs

Figures and Photographs of good quality should be submitted online as a separate file. Please use a lettering that remains clearly readable even after reduction to about 66%. For every figure or photograph, a legend should be provided. All authors wishing to use illustrations already published must first obtain the permission of the author and publisher and/or copyright holders and give precise reference to the original work. This permission must include the right to publish in electronic media.

Photographs of identifiable subjects must be accompanied by signed permission from patient or legal representative authorizing publication. Photographs in which faces or eyes should be covered with black bars if necessary. For further information see <http://www.elsevier.com/patientphotographs>

Tables

Tables should be numbered consecutively with Arabic numerals and must be cited in the text in sequence. Each table, with an appropriate brief legend, comprehensible without reference to the text, should be typed on a separate page and uploaded online. Tables should be kept as

simple as possible and wherever possible a graphical representation used instead. Table titles should be complete but brief. Information other than that defining the data should be presented as footnotes.

Please refer to the generic Elsevier artwork instructions: <http://www.elsevier.com/artworkinstructions>

Colour reproduction

Brain & Development is now also included in a new initiative from Elsevier: ‘Colourful e-Products’. Through this initiative, figures that appear in black & white in print can appear in colour, online, in ScienceDirect® at <http://www.sciencedirect.com>. There is no extra charge for authors who participate.

For colour reproduction in print, you will receive information regarding the costs from Elsevier after receipt of your accepted article. Please indicate your preference for colour in print or on the Web only. Because of technical complications which can arise by converting colour figures to “grey scale” (for the printed version should you not opt for colour in print) please submit in addition usable black and white versions of all the colour illustrations. For further information on the preparation of electronic artwork, please see <http://www.elsevier.com/artworkinstructions>.

Preparation of Supplementary data

Supplementary files supplied will be published online at no cost alongside the electronic version of your article. Supplementary files include, but are not limited to, supporting applications, movies, animation sequences, high-resolution images, background datasets, and sound clips. Please ensure that data are provided in one of our recommended file formats to ensure that your submitted material is directly usable. Authors should submit the material in electronic format together with the article and supply a concise and descriptive caption for each file. For further information on the preparation of electronic artwork, please see <http://www.elsevier.com/artworkinstructions>.

Copyright Transfer

Upon acceptance of an article, you will be asked to transfer copyright (for more information on copyright see <http://www.elsevier.com/locate/copyright>). This transfer will ensure the widest possible dissemination of information. If excerpts from other copyrighted works are included in the submission, the author(s) must obtain written permission from the copyright owners and credit the source(s) in the article. Elsevier has pre-printed forms for use by authors in these cases: contact Elsevier’s Rights Department, Philadelphia, PA, USA: phone: (+1) 215 238 7869, fax: (+1) 215 238 2239,

e-mail: healthpermissions@elsevier.com. Requests for materials from other Elsevier publications may also be completed on-line via the Elsevier homepage <http://www.elsevier.com/locate/permissions>.

Retained author rights

As an author you (or your employer or institution) retain certain rights; for details you are referred to: <http://www.elsevier.com/authorsrights>.

PDF Proofing

One set of page proofs in PDF format will be sent by e-mail to the corresponding author (if we do not have an e-mail address then paper proofs will be sent by post). Elsevier now sends PDF proofs which can be annotated; for this you will need to download Adobe Reader version 7 (or higher) available free from <http://www.adobe.com/products/acrobat/readstep2.html>. Instructions on how to annotate PDF files will accompany the proofs. The exact system requirements are given at the Adobe site: <http://www.adobe.com/products/acrobat/acrrsystemreqs.html#70win>.

If you do not wish to use the PDF annotations function, you may list the corrections (including replies to the Query Form) and return to Elsevier in an e-mail. Please list your corrections quoting line number. If, for any reason, this is not possible, then mark the correc-

tions and any other comments (including replies to the Query Form) on a printout of your proof and return by fax, or scan the pages and e-mail, or by post.

Please use this proof only for checking the typesetting, editing, completeness and correctness of the text, tables and figures. Significant changes to the article as accepted for publication will only be considered at this stage with permission from the Editor. We will do everything possible to get your article published quickly and accurately. Therefore, it is important to ensure that all of your corrections are sent back to us in one communication: please check carefully before replying, as inclusion of any subsequent corrections cannot be guaranteed. Proofreading is solely your responsibility. Corrected proofs must be returned within 48 hours of receipt. If the Publisher has not received a reply after 15 days, the assumption will be made that there are no errors to correct, and the article will be published after in-house correction.

Reprints

A total of 50 reprints of each paper will be provided free of charge to the corresponding author. Additional copies can be ordered at prices shown on the reprint order form, and should be returned with the corrected proofs. Reprints ordered after the print run has been completed will be subject to a higher charge.
